VRP300-PLUS Setting Guide

I. Connect Method (AC 110V-240V) :

1. Repeater+Bridge Mode

2. AP Mode

II. Set Network

1. Repeater + Bridge Mode

1) Connect VRP300-PLUS:

- ① PC wired connect to the Ethernet port of VRP300-PLUS;
- ② Or connect WiFi signal of VRP300-PLUS by Smart phone and PC, its hotspot parameters as below:

WiFi SSID: VONETS_*****

WiFi Password: 1234578

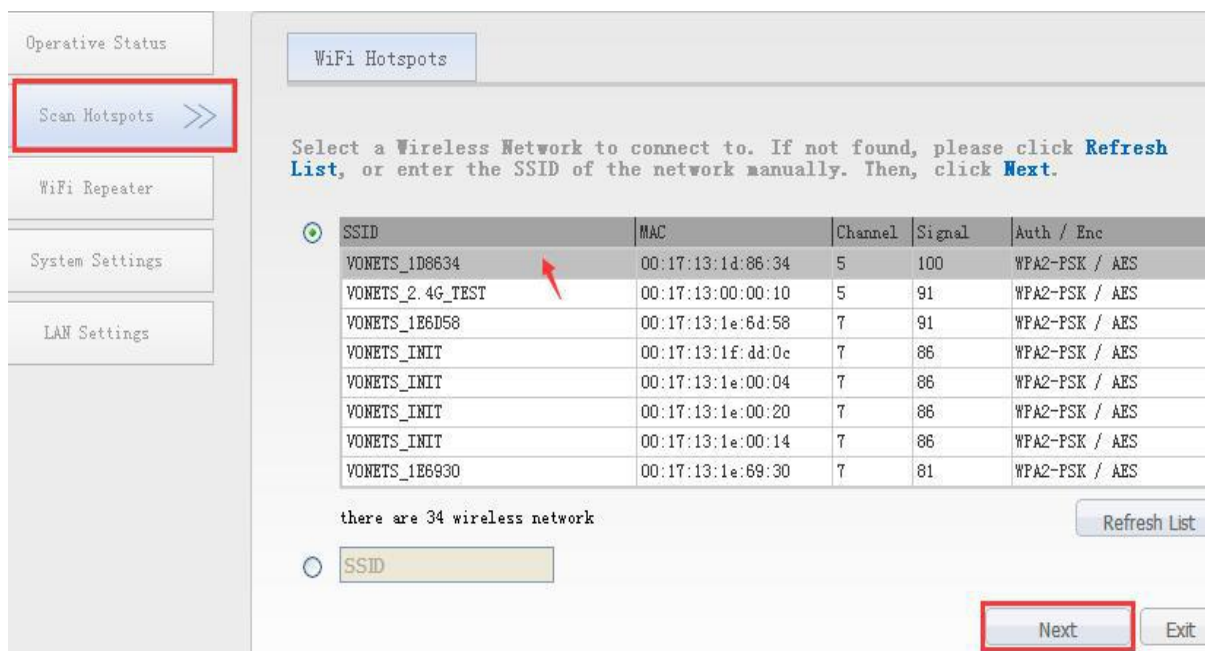

2) Open Browser, input configured page: <http://vonets.cfg> (or IP: 192.168.254.254);

3) Enter User name and Password in login page (both are admin), click “Login” button to enter configured page;

4) “Scan Hotspots”, choose the source hotspots, click “Next”;

5) Input “Source wireless hotspot password”, click “Apply”;

6) Reboot the device, VRP300-PLUS will connect to the configured WiFi hotspot

automatically, if connection is successfully, green LED light will quick flash;

- Remark 1: ①VRP300-PLUS is not configured connect to any hotspot, hotspot connection status light (Green Light) will quick flash;
 ②VRP300-PLUS is connected successfully, hotspot connection status light (Green Light) will quick flash;
 ③VRP300-PLUS is connected failed, hotspot connection status light (Green Light) will slow flash.

2. AP Mode

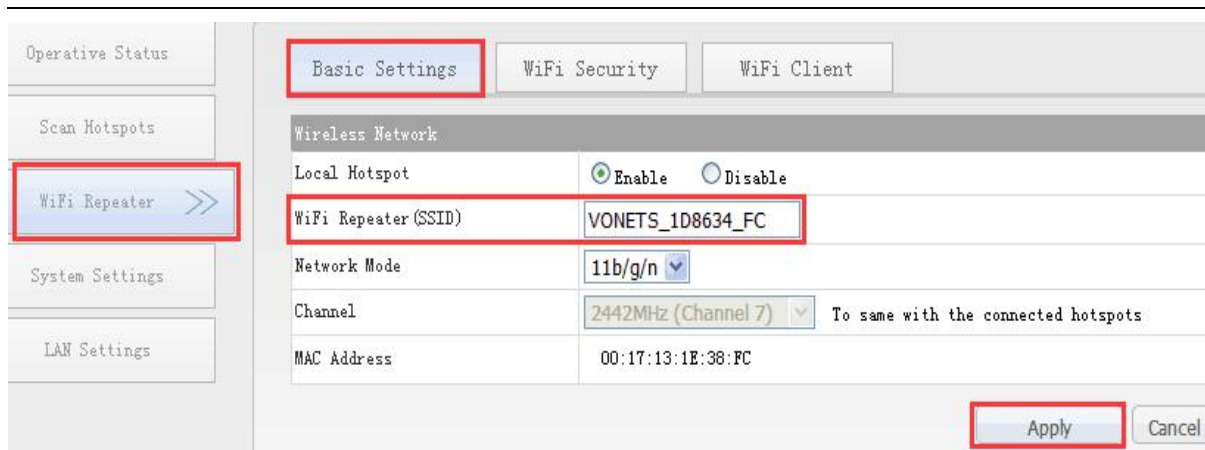

In AP mode, there is no need any configuration, wireless connection to the VRP300-PLUS hotspot can be networked (For connection method, please refer to “Repeater+bridge mode” setting)

Remark 2: When VRP300-PLUS is connected to external network, its IP address will be changed. At this time, if you need to login configured page, we suggest you to login : <http://vonets.cfg> . Or in the Windows command line window, enter command: ping vonets.cfg, to obtain the device IP, then login the page by this IP.

III. Revise WiFi name and WiFi password:

1)The network device connects to the VRP300-PLUS and enters the configuration page (For connection method, please refer to “Repeater+bridge mode” setting);

2)Revise WiFi name: Jump to “WiFi Repeater”----”Basic Settings”, enter new WiFi name in “WiFi Repeater (SSID)”, click “Apply”;

3) Revise WiFi password, in “WiFi Repeater”----”WiFi Security”, enter new WiFi password in “Pass Phrase”, click “Apply”;

4) Reboot device, jump to “System Settings”----”Equipment To”, click “Restart”, when it is finished, then it will take effort;

Appendix Frequently Asked Questions

1. How to reset to the factory default parameters?

Power on the device, after 60 seconds, long press Reset button until 5 seconds, the green light will flash a few, then the device will automatically reset to the factory default parameters (it will take about 60 seconds to reset the device), **during the recovery of the factory operation, the product can't be powered off, otherwise it may cause the product to Damage.**

2. Does VRP300-PLUS support firmware upgrade, how to upgrade?

VRP300-PLUS supports firmware upgrade, and support online upgrade, please visit website: www.vonets.com to refer to the related documents.

3. The device WiFi hot spot can be found, but the smart phone or PC can't connect to this device hotspot?

- Reason 1. Due to some unexpected operation or power down, caused the destroy of device parameters. At this time, just need to reset the device to factory default parameters;
- Reason 2. The device WiFi doesn't work at the best channel, make the performance worse. At this time, you can try to change the source WiFi hot spot and this device WiFi channel to make the performance better;
- Reason 3. The smart phone or PC haven't configured the correct WiFi password;

4. The device has been configured the source WiFi hot spot parameters, the smart phone or PC has connected to the device WiFi hot spot, but still doesn't get internet?

- First, check the status light to know the current state of the device, then according to the state of the device to analyze the fault reasons;
- Reason 1. The distance between the device and source WiFi hot spot is too long, cause the communication performance degradation, finally effect the user's access to the Internet. At this time, just need shorten the distance between the device and source WiFi hot spot to solve this problem;
- Reason 2. Due to some unexpected operation or power down, caused the destroy of device parameters. At this time, just need to reset the device to factory default parameters;
- Reason 3. The device WiFi doesn't work at the best channel, make the performance worse. At this time, you can try to change the source WiFi hot spot WiFi channel to make it the same as the default channel of the device, the reboot the device, the device will automatically exchange to the same channel as the source WiFi hotspot, to make the performance better;
- Reason 4. There are several WiFi hot spot around the device, WiFi channel mutual interference, make the performance worse. At this time, you can try to change the source WiFi hot spot and this device WiFi channel to make the performance better;
- Reason 5. The configured source WiFi hot spot parameters are not correct. At this time,

just need to configure the correct parameters then reboot the device;

5. The smart phone or PC has been connected the device by WiFi or Ethernet cable, but user can't log in the device WEB page, or after log in the WEB it shows error?

- Reason 1. The users don't use the browser recommended by VONETS(IE, Google Chrome, Safari, the mobile phone browser);
- Reason 2. The smart phone or PC installed the firewall, the security level is set too high, caused the above problem. At this time, only need to close the firewall;
- Reason 3. The security level of browser is too high, it will also cause the above problem. At this time, just need to reduce the browser's security level, then log in again;
- Reason 4. The IP address of the device input error. For the new device from the factory, user only need input the correct IP address according to the instruction guide; for the device that has connected the source hot spot, user only operate according to <Remark 2>.
